Overview

ISMS D23 Manila is an advanced records management solution designed for Philippine private schools. Users can customize its features to fit the specific needs of their school.

The system covers Basic Education (K-12) and Higher Education, offering various applications integrated into a single workspace. Each functionality, whether student database or school office accounting, has a built-in audit trail to ensure data integrity.

Why a school management system?

Schools must undergo digital transformation to keep up with the ever-changing learning and business environments.

With a school management system, administrators can gain insights based on data for making better decisions, improving enrollment, saving on costs, enhancing experiences, and increasing efficiency.

What is ISMS D23 Manila?

ISMS D23 Manila builds on the foundation of its previous iterations. It's an advanced network database software for efficient management of school records. The system is built for private schools, understands the needs of Philippine schools, and is customizable for a public school setup.

User-friendly and reliable technology created by a team of Filipino developers with a heart and passion for improving the country's education sector.

Perpetual license

Aside from comprehensive features, D23 Manila offers perpetual licensing, which allows the school to use the system for free after the contract expires. We provide paid support at a very minimal cost.

Deployment

Here's why we prefer on-premise over subscription-based cloud deployment:

- Cloud deployment might be cheaper on the surface but more costly in the long term for a small school.
- Our perpetual license program allows the school to use the system for free after the 5-year contract, which is not feasible with cloud deployment.
- We aim to help schools become independent of the system provider over time.

However, should the need arise, we have an option to use third-party cloud data backup.

Features

Students Database

Students Masterfile, Add/Edit Student, Student Inquiry, Class Sectioning, Attendance, Guidance, Clinic, Students Reports (Male & Female), and Birthdays Monitoring Dashboard

Accounts Management

Assessments, Add/Edit/View Account, SOA/Record of Payments, Balance Inquiry, and Billings

Asset Management *New*

Asset Detail, Reports, All Assets, Asset Search (by Category, Location, Department), and Assets Retired

Pricing

At Php550 per student annually for five (5) years, D23 Manila emphasizes value for money for the school. The payment is more of a system purchase than an annual subscription.

Our approach might be counterintuitive, but our mission is to help schools — both big and small — enjoy the benefits of our technology. For a school with 300 students, the cost is Php165,000 a year, and so on.

The package includes online registration (hosted by ISMS), knowledge-based remote support and consultancy, online or onsite deployment and implementation, and user training.

System requirements

Hardware components
- *Dedicated server* - Intel Core i5 with 500GB storage, 8GB memory, or higher specs. For schools with 1000+ students, we recommend an enterprise server.
- *Workstations* - At least, Intel Dual Core with 100GB storage, 4GB memory or higher.

Software components
- Windows 7 OS or higher version
- MS Office 2007 or higher version
- MS SQL Server 2008 or higher version (if any, but not required)
- Firewall and antivirus (if any)
- Remote desktop

Network
- Server room (recommended, but not required)
- LAN-ready for an inter-office setup (DHCP or manual configuration)
- Database/IT administrator (recommended, but not required)

About ISMS

A group of friends has been in software development for years, building systems for schools, cooperatives, and private and government offices. Finally, we formed and registered our company in 2018 to focus on improving the country's private schools. Our commitment is to become the benchmark of school management technology and support.

Team

Members of our team are highly trained and qualified IT professionals specializing in software development, deployment, and implementation. We also have consultants in the areas of business, education, and technology.
